PROFESSIONAL SUMMARY

Software Development Engineer with experience building scalable internal developer platforms, CI/CD automation, observability solutions, and enterprise tooling at CVS Health. Skilled in full-stack development, with a strong focus on developer experience, platform reliability, and engineering efficiency. Proven ability to collaborate across cross-functional teams to deliver impactful solutions that improve product adoption, reduce operational costs, and accelerate software delivery.

TECHNICAL SKILLS

Languages	Python, C/C++, C#, Dart, HTML/CSS, SQL, R, Matlab, Haskell, YAML, PHP, JavaScript, TypeScript, Bash
Frameworks & Web	Next.js, Node.js, Drizzle ORM, Express Stack, Flutter, Firebase
DevOps & Cloud	GitHub Actions, Linux (Ubuntu, Mint), Virtual Box, VMware, Azure Fundamentals Ansible, Jenkins, Docker, TIETools, Grafana
Platform & Tools	Android studio, Xcode, IBM DataPower, API Connect, MicroEdge, Google Analytics, Jira, Rally, Confluence, Miro, Power BI
Methodologies & Governance	SAFe, Scrum, Kanban, Agile, XP, Waterfall, SDLC

WORK EXPERIENCE

CVS Health

Remote, IL

Software Development Engineer

Jan 2026 – Present

- Develop **Flip**, CVS Health's enterprise feature flagging and experimentation platform used by engineering teams across the organization, including applications supporting **MinuteClinic** and other enterprise products.
- Build full-stack platform capabilities using **Next.js**, **TypeScript**, and **Drizzle ORM**, delivering scalable workflows for feature flags, segments, targeting rules, and controlled application rollouts.
- Support the enterprise migration from **LaunchDarkly to Flip**, helping reduce third-party software licensing costs by approximately **\$2M annually** while expanding adoption of internally developed tooling.
- Partner with product designers, platform engineers, and application teams to build **developer-focused interfaces and workflows**, improving usability, reliability, and adoption across engineering teams.

DevEx Engineer (SWE Program)

Jan 2025 – Jan 2026

- Contributed to CVS Health's **Experience Platform**, building reusable platform capabilities and internal tooling that accelerate how engineering teams develop, onboard, and ship digital experiences.
- Built automated **GitHub Actions CI/CD pipelines** for semantic versioning, Docker image creation, release tagging, and internal Actions, reducing manual release processes and improving deployment consistency.
- Implemented the **MicroEdge control layer** to strengthen platform authentication capabilities and improve the developer experience for teams consuming the platform.
- Developed production **Grafana observability dashboards** tracking availability, HTTP response codes, CPU, memory, latency, and application errors, improving visibility into platform health and accelerating troubleshooting.
- Improved the release and security workflow for **Lighthouse Server** by automating container builds and integrating Snyk and Secure Pipeline scanning, while creating documentation and guidance to help product teams successfully adopt and deploy the Experience Platform.

Automation Engineer (SWE Program)

Jun 2024 – Jan 2025

- Led **4 cross-functional automation teams** through successful GitHub EMU migrations, coordinating repository transitions and minimizing disruption across multiple engineering teams.
- Automated **DataPower firmware upgrades and infrastructure operations**, reducing manual intervention and improving the speed and consistency of recurring maintenance activities.
- Designed and maintained **Jenkins CI/CD pipelines** and automation workflows, streamlining software delivery and improving operational efficiency.
- Developed an **automated inventory management solution with real-time usage tracking**, improving visibility into automation activity and enabling teams to monitor utilization and operational trends.
- Built internal tooling and observability capabilities, including **front-end automation forms, playbook logging and analytics, troubleshooting utilities, and technical documentation**, making automated processes easier to execute, monitor, and support.

Jr. Scrum Master / IT Project Manager Contractor

Sep 2023 – Jun 2024

- Reduced VM provisioning time from **4–6 months to under 3 hours** by supporting Express Stack provisioning/deprovisioning, tooling, and UI testing.
- Led Agile/SAFe execution across **10+ cross-functional teams**, managing PI and iteration planning in Miro and facilitating standups, retrospectives, and testing bridges.
- Coordinated **5+ technical projects**, managing scope, risks, constraints, and deadlines across databases (Oracle, DB2, SQL), IIS, Windows, and Red Hat Linux environments.
- Served in **Scrum Master, Project Manager, and Product Manager capacities**, driving delivery of Express Stack solutions for enterprise engineers and application developers.
- Partnered with stakeholders and technical teams to resolve defects, deliver executive reporting, and support enterprise integrations using **API Connect and DataPower**.

EDUCATION

Washington State University — Pullman, WA

Aug 2018 – Dec 2022

B.S. in Software Engineering | Minor in Mathematics

CERTIFICATIONS

- **Certified Professional Scrum Master I (PSM I)**
- **Certified SAFe 6 Agilist**
- **Microsoft Certified: Azure Fundamentals**
